DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: The serial number for the referenced design application is missing from page 1, line 2 of the specification. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-10, 13-15 and 37-44 are rejected under 35 U.S.C. 102(b) as being anticipated by Warke '767. Warke discloses a turf aerator device (figures 1-11) comprising a body 10 of unibody construction, a plurality of wheels 11 coupled to the body (as seen in figures 2, 3 and 5) and supporting the body for movement on the turf, the body having left and right side members (as seen in figure 9), made from sheet metal and having substantial weight. Also, Warke shows (as seen in figure 2) the

members having "L" and "V" shaped bends which inherently improves their strength as well as the device having a crank shaft member 16, eccentric bars 17 and plates 18 extending between the side member (figure 9) and cover at least partially by the top member of the unibody. Further, Warke discloses the aerator having a handle 46 which is hingely attached to the body (via 48).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Warke '767 in view of Oliver '903. Warke discloses the claimed device substantially as discussed above but fails to show the device having plug removing tines, weighted sides, a hinged top cover or gauge sheet metal ranging between 4 to 16 gauge. However, Oliver clearly teaches that it is well known to provide such a device with weighted side members (via 36,37; as seen in figure 2) as well as plug removing tines (as seen in figure 10, area of reference numeral 24). Both the employment of a hinged top cover and the correct gauge of sheet metal is an obvious matter of choice of design,

absent any showing to the contrary. It would have been obvious to one having ordinary skill in the art at the time of the invention to provide the device of Warke wit the teachings of Oliver in order to provide an aerating device having greater operational range and effectiveness.
